

Direction for use

Guardian Textile Protection

Guardian Textile Protection provides easy and effective protection of furniture with textile covers and other textiles.

The product does not alter the textile's natural qualities, appearance and breathability, but provides an invisible protection for easier care.

Guardian Textile Protection can be used on all new or newly cleaned textiles.

For environmental and safety reasons, Guardian Textile Protection is produced with carbonic acid as a propellant.

Hold the can vertically while spraying an even layer on the textile, which should become wet.

Spraying distance is approx. 25 cm.

Any spillages should be wiped up immediately.

Drying time is approx. 90 minutes at minimum 20°C.

If the textile gets white "shadows", these can be brushed off with a soft, well-wrung cloth.

To check whether the treatment is sufficient, a little water may be sprayed onto the surface - when completely dry.

If the water is absorbed, repeat the treatment.

Make sure the room is adequately ventilated if the product is used indoors.

Keep out of the reach of children.

Always test the product on a piece that is not visible before use.

We hope you enjoy using Guardian Textile Protection!
